

Highlights

- Solid State, Fully Sealed
- 60A total capacity
- 6 wired circuits
- Small Size 2"x3"x0.9"
- Programmable
- 2 Switching Modes
- Start/Stop Delays

System Overview

The PDM60 is designed to power devices, protect circuits, and shut things down if there's a problem. It protects you and your investment. Whether you're adding accessories to your vehicle, or replacing an old fuse panel, there's a better way.

The PDM60 provides circuit protection and power distribution when connected directly to your 12 volt battery. It divides a maximum of 60 amps across 6 circuits and will simplify your wiring by eliminating fuses and relays in most cases. Individual circuits can be configured in different combinations ranging from 1 to 20 amps. Additional programming options include ignition and ground triggering and time delayed activation and deactivation. The PDM60 sells for \$199. For more information about the PDM60 please visit www.pdm60.com.

Rowe Electronics, Inc. is an Iowa based design and manufacturing firm and is one of the premier suppliers of remote control systems based on microprocessor technology. It is our goal to continue developing leading-edge products which stand above and beyond competitive offerings.
